THE IMPLEMENTATION OF THE ACTIVE RIGHTS OF THE PARTIES IN THE DRAFT OF THE UNIFIED CODE OF CIVIL PROCEDURE

© 2016 Alexeeva Natalia Vladimirovna
PhD in Jurisprudence, Associate Professor, Associate Professor of Department of Civil, Arbitration
and Administrative Procedure Law
Russian State University of Justice
69, Novocheremushkinskaia str., Moscow, 117418, Russia
E-mail: Alekseevy2004@mail.ru

The realization of the right of the plaintiff to change the founding or subject of claim, to increase the size of the claim, and the rights of the defendant to file a cross-action needs to be more stringent legislative regulation, namely the need to establish a timeline for the fulfillment of the relevant proceedings and the legal consequences of failure to comply with these terms of deprivation of the right to the relevant proceedings. Proposed revision of the relevant articles of the draft unified code of civil procedure.

Key words: active rights of parties, change of founding or subject of claim, to increase the size of the claim, cross-action, Unified code of civil procedure.

The article is devoted to the conception of sustainable development of the economic entity of transport. In the context of establishing conditions for the sustainable development it has been analyzed the features of the investment policy of the economic entity of transport as a component of the public policy in the economic sphere (by the example of the railway transport).

Key words: sustainable development, economic system, investment policy, public policy, economic entity of transport.

As economic processes obey the same laws with regard to the specific characteristics which do not contradict, it is possible to manage sustainable development at different levels - business organizations, industries, territories, the national economy as a whole. Sustainable development of economic entities, industries ensures sustainable development of the regions and the state. In addition,

at the present stage mesoeconomic systems are the focus of economic space, which creates the basis for sustainable development of the national economy. In this context, the urgent task of management of mesoeconomic entities is the improvement of process management of sustainable development. The task of management is focused on improving the performance of public policy as the relationship between macro-level and business entities is carried out in the meso-space through policy in fiscal, monetary and investment fields, etc.

Investment demand is an inherent property of economic system, and the investment development is a generator of sustainable development. Therefore, the study of sustainable development of economic systems of meso-level (including the railway transport) is directly related to the study of the investment policy as a component of the state policy in the economic sphere.

In article dynamics of a price index of products of agricultural industry of regions of the Central federal district during 2000-2014 is considered. It is shown that temporary ranks of volume of production

in current prices can be approximated by exponential models. From the point of view of an exception of influence of uncontrollable factors, the author offers to use in the analysis of regional indicators MNK-estimates of parameters of models - calculated values of amount of products in 2014 and indicator surplus coefficient. It is provided that dynamics of a price index of producers of products of agricultural industry in regions of the Central federal district during this period can be also approximated by exponential models, MNK-estimates of their parameters are received. A conclusion is provided that the price index of producers of products of agricultural industry can serve as the managing level indicator in regions.

Key words: agricultural products, production capacity, the time series, the current price, the exponential model, the OLS estimation, the price index.
