E-mail: chernomyrdina_2017@mail.ru

The article discusses the features of the use of public-private partnerships in the implementation of the social function of the modern state. A comparison of the practice of public-private partnership in the social sphere in Russia and in the UK. The conclusion is that public-private partnerships can be used only for the realization of the public interest as the common interest of the social subject.

Key words: state, social function, partnership, relations.

One of the main activities of the modern state is its social function.

In the modern theory of law the allocation of the social functions of the state as an independent branch of state activity can be attributed to a number of solutions. Different disclosed the concept of social function, actively developed the problem of the transformation of the social function as a function of the welfare state, the problem of the mechanism of its implementation, the relation with other functions, primarily economic.

The functions of the welfare state - are the main activities napravleniya expressing his essence. In contrast to the social functions characteristic of any state that in the early stages of development of state forms appear in the form of general principles of activities of the state (for example, redistribution of wealth, employment regulation) or in the form of economic functions, the functions of the welfare state appear during the various stages of evolution state. However, their appearance is connected with the change of dominance relations gosudarstvo - society relations in the state - a personality. And there are social functions from the state directly at certain stages of development of the relations of production, with the change of man's place in the structure of proizvo-ditelnyh forces, with the advent of the new evolutionary type of industrial states.

**INTENSIFICATION OF ECONOMIC COOPERATION AS A FACTOR
OF FORMATION OF LEGAL SYSTEMS**

© 2016 Tkachenko Sergei Alexandrovich

Institute of Legislation and Comparative Law under the Government of the Russian Federation
34, B. Cheremushkinskaia str., Moscow, 117218, Russia

Formation of the law - it is a long historical process, which takes a number of steps. The initial step in the complex process of the formation of the legal system acts somehow ideologically expression of integration processes at various levels, through which ensured the coordination of social justified freedom of the individual and the particular interests of the cultural-historical community in which it operates. This approach is developed in this article through the disclosure of economic cooperation as a factor of formation of legal systems.

Key words: right, legal system, formation of the legal system, the legal origin, integration processes, economic integration.

E-mail: yd72@mail.ru

The article analyzes the contribution of remittances to international capital flows in developing national economies. It is proved that remittances and savings ethnic communities are the main sources of external flows of financial resources for many developing countries. Necessity of procedures simplifying of state regulation of money migrants transfer is justified. Despite their considerable blessings for individuals, households and communities migration and remittances are not able to solve the fundamental problems of structural reforms.

Key words: remittances, direct foreign investment, sustainable development, international capital flows, savings.

MARKET TRANSFORMATION OF THE SUPPLY CHAIN AND LOGISTICS SERVICES IN THE TRANSITION TO A MULTI-CHANNEL RETAIL MODEL SALES ORGANIZATION

© 2016 Mikhailiuk Mikhail Vladimirovich
PhD in Economics

Rostov State University of Railways
2, pl. Rostov Shooting Shelf of the People's Militia, Rostov-on-Don, 344008, Russia
E-mail: mihailuk.m@gmail.com

The author carries out synthesis of a modern market practices transform complex supply chains and logistics in terms of multi-channel sales model in the national retail. This process is accompanied by an increase in the importance of logistics services in the promotion and sales management of multi-channel retailing, as well as the operational complexity of logistics, the most progressive development which today is observed in the major operators of online retailers that creates the risk of further reducing the quality of service for smaller online stores, as well as reinforces the fragmentation of logistics outsourcing, the structure of which will be the strengthening of the position of 3PL-providers, with more capacious competence for integrated sales service system.

Key words: logistics, supply chain, multi-channel sales model, order fulfillment, online retail.

The author considers the specifics of the modern evolution of logistics in the process of development, now has online retail, which is characterized by more radical, technologically complex and profound changes in the retail logistics services in the process of transition to a multi-channel sales model of the organization. At the same time, the author conducts a number of parallels with the development of the logistics backbone that allows more clearly diagnose the trends that define the modern development of the supply chain in a multi-channel retail.

In the article, carries out synthesis of a modern market practices transform complex supply chains and logistics in terms of multi-channel sales model in the national retail. This process is accompanied by an increase in the importance of logistics services in the promotion and sales management of multi-channel retailing, as well as the operational complexity of logistics, the most progressive development which today is observed in the major operators of online retailers that creates the risk of further reducing the quality of service for smaller online stores, as well as reinforces the fragmentation of logistics outsourcing, the structure of which will be the strengthening of the position of 3PL-providers, with more capacious competence for integrated sales service system.

The article describes the errors in the forecasts as a result of underestimating the cyclical nature of reproduction, and changes in the age structure of the population as an element of changes in the process of human reproduction. Previously conducted by the authors studies are reported which confirm the possibility of increasing the fertility level as a result of the identified cyclic reproduction and growth of the reproductive population potential in 2005-2017. And also the possibility of preventing the next demographic dip in the 2017-2030 is revealed.

Key words: demographic processes, age structure of the population, reproductive population, forecast, population policy.

* To the writing of this article prompted a study conducted by the political columnist of the magazine "Forbes" mark Adomanis, who noted that the experts failed to predict the latest improvements in the Russian demographic situation (<http://inosmi.ru/russia/20131029/214301614>). In this aspect, we present an overview of our research from 1996 to the present, in which were reflected the predicted improvements in the birth rate in Russia and its regions in 2005-2017 gg. (Berova F.J. (2012) Regional peculiarities of demographic processes in Russia: methodological aspects of the study : abstract. dis. ... d-ra ekon. of Sciences (ISPR RAS). Nalchik, p. 25. See also the dissertation on competition of a scientific degree of the doctor of economic sciences (dibase.ru/article/07022012_berovafzh //www.dissercat.com)). In the future our research will be devoted to identify opportunities to mitigate and prevent another demographic failure in 2017-2030.
