LAW AND MORALITY IN CIVIL REALITY

© 2017 Khamidullina Farida Ildarovna
PhD in Jurisprudence, Associate Professor of Civil Law Department
Kazan Federal University
18, Kremlevskaia str., Kazan, 420008, Russia

The article is devoted to the analysis of the relationship between law and morality, according to the author, inextricably linked. Deep ties of morality and rights are in the co-evolution and correlation of moral and legal consciousness, the conditioning factors of which are also reflected in the study. In addition, the author forms certain guidelines that promote the search for justice in law enforcement practice and the development of legal awareness that contributes to the effective overcoming of the conflict of law and justice, which is relevant for any society at any stage of its development. In the study, the author comes to the conclusion that the phenomenon of civil law is not fundamentally subject to comprehension except in its organic, deep connections with morality, and as a fundamental link between morality and law is the conscious experience of reciprocity

Key words: law, morality, justice, the phenomenon of civil law, moral consciousness, legal consciousness.

The prospects of development of digital economy in Russia are considered. The role of the digital industry at the present stage of its development is evaluated. We are talking about the fact that the transition to a new so-called nanotechnology is being completed. Now, instead of foggy reflections on "Industry 4.0" or "Society - 5.0", we can not assume, but boldly talk about the digital revolution and its important, but short - term role in the continuity between the fifth and sixth technological order. The benefits of the financial system of the country from the widespread introduction of digital technologies are determined, and it turns out that the additional effect of the digitalization of the economy is due to this.

Key words: digital economy, digital revolution, technological systems, Gazelle enterprises.

E-mail: students_forum@mail.ru,

The article considers the development prospects of Russia in 2018-2020. It deals with the factors that inhibit and accelerate the national economic growth. There is given the description of the statistical data and graphs of the economic growth' factors of Russia. There are singled out the structural (institutional) factors the economic growth as the main ones, which allows to delve into fundamental patterns of innovation structure' change in the Russian industry. These fundamental patterns of quality structure of industrial production are demonstrated with the help of laws of compensation and submission of resources engaged in it. It is stipulated that there is the fundamental connection between the factors the Russian economic growth and the realization of these laws as to formation of the institutional environment for the economic agents.

Key words: positive factors of economic growth, negative factors of economic growth, fundamental low of compensation of resources, fundamental low of submission of resources,, institutional environment.

The problems arising in the characterization of statistical aggregates in terms of the degree of homogeneity are considered. The study of the nature and degree of variation in individual units of the aggregate is the most important issue of any study and allows us to judge the homogeneity of the population, the stability of the values of the trait, the typicality of the average, the relationship between the characteristics. For the purpose of improving the statistical tools, proposals for the normalization and scaling of the coefficients of variation are presented.

Key words: variation, dispersion, normalization of the coefficient of variation, distribution series, attribute.

In this article it is said that the analysis of the state of supply and demand, as well as exports and imports in the agricultural and food market of the North Caucasus Federal District in the context of its subjects showed, firstly, the presence of conflicting trends, and secondly, the export and import of food proves to be slightly correlated with the proposal food and the same can be said about the supply of food, which is weakly correlated with the import of food, and finally, thirdly, where a full-fledged strategy for foodstuffs is developed and implemented of import substitution, there is the situation in the agro-food market is more favorable and advantageous, than where there is no such strategy. One of the subjects of the NCFD, in which the noted positive tendencies are manifested themselves to the greatest extent is the Kabardino-Balkaria Republic, whose experience deserves attention.

Key words: agrarian and industrial complex, food import substitution, food security, agro-food market, import and export of food products/
