THE PRINCIPLES OF MEDIATION AS A LEGAL INSTITUTE: THEORETICAL AND LEGAL ANALYSIS

© 2016 Fastova Marina Andreevna
PhD in Jurisprudence, Associate Professor of the Department of Theory and History
of State and Law
Astrakhan State Technical University
16, Tatishchev str., Astrakhan, 414056, Russia
E-mail: romanenkoma82@mail.ru

The present article is devoted to the analysis of the principles of mediation representing the certain legal category acting as a link between theoretical and legal interpretations of mediation, expressing essence of mediation, opening and concretizing his general concept.

Key words: mediation, legal principles, legal conflict, justice, legality, confidentiality, equality.

The dialectic method used in work allowed to consider the principles of mediation as all-legal category, to reveal elements in the content of the principles of mediation, to compare their theoretical understanding and practical application, to define the general tendencies in the course of realization. The structurally functional method was used at creation of system of the principles of mediation and justification of a role of each of them. The analysis of the principles of mediation allowed to draw a conclusion that the principles predetermine further development of mediation, representing a basis of self-regulation of intermediary activity. Besides, allocation of the principles allows to individualize mediation as an independent look out of - and jurisdictional activity, to define a qualitative originality of rules of its organization, carrying out and features of a legal regulation in comparison with jurisdictional ways of permission of the legal conflicts. All this causes need of definition, systematization and studying of the principles of mediation. Eventually and further development of all-legal institute of mediation the principles, most likely, will be supplemented, change, unified and to be concretized.

Mediation, being legislatively settled procedure, submits to the fundamental beginnings of its carrying out, that is the principles. The principle of mediation is a scientific or moral beginning, the basis, the rule, a basis from which do not recede when holding a procedure of mediation. The analysis of the principles of mediation as all-legal institute allows to allocate the following classifications: the principles fixing features of mediation, and also the status of the parties (the coordination principles): principle of impartiality of the intermediary; principle of independence of the intermediary. These

principles find the realization in mediation at permission of the legal conflicts in different branches of the right (civil, family, labor, etc.); the principles fixing the procedure of mediation, an order of its carrying out (the adjusting principles): principle of voluntariness; principle of independence of the parties; principle of equality of the parties. The specified principles of mediation as all-legal institute are characteristic both of mediation in the economic sphere, and of mediation at permission of the legal conflicts. Besides, it is necessary to refer to this group of the principles also the principle of confidentiality which find the realization in mediation at permission of the legal conflicts in different branches of the right (civil, family, labor, etc.).

E-mail: lvls@mail.ru

In the article the problem of increased competition in the banking sector, forcing banks to be attentive to the preservation and increase sustainable position among the financial institutions of competitors. With these positions evaluated the relationship of the borrower's financial position as the main agent of raising funds and the bank's competitiveness. It was revealed that the financial condition of the borrower directly proportional effect on the formation of the competitive advantages of the bank; It proved the importance of a competent financial analysis of the borrower; classified indicators for which the analysis carried out; presented values ranking, identifying the financial position of the borrower.

Key words: banking competitiveness, liquidity, turnover, financial stability, rating estimation, cash, credit risk, the size of reserves.

In the article the problem of increased competition in the banking sector, forcing banks to be attentive to the preservation and increase sustainable position among the financial institutions of competitors.

The authors highlighted the parameters that are needed to give an objective description of the financial condition of the borrower entity, are considered for calculating the coefficients of the borrower's financial stability, methods for the determination of business activity and provides algorithms for rating the financial condition of the organization.

It is concluded that the strategy of activities of a bank in a market economy implies not only the realization of their own interests, evolving under the influence of competition, but also to address the needs of its customers. We must carefully examine not only the role and the degree of impact on the functioning of the existing institutions of the borrower, but also pay special attention to his financial situation. It is the result of a fundamental base of financial autonomy and competitiveness of the Bank that is relevant in view of the expansion of competition between the banking sector and involved in its participants.

THE FORMATION AND USE OF FINANCIAL RESOURCES OF THE POPULATION IN CONDITIONS OF MODERN MARKET ECONOMY

© 2016 Levchenko Larisa Vladimirovna

PhD in Economics, Professor of Department Economic Theory

© 2016 Gracheva Elena Olegovna

Samara State University of Economics

141, Sovietskoi Armii str., Samara, 443090, Russia

E-mail: lvls@mail.ru, ms.lenasamara@mail.ru

In the article the formation and use of monetary income of the population in conditions of modern market economy. The analysis of the saving behavior of the population and the factors influencing the decision of investment of the savings.

Key words: household, financial resources, disposable income, final consumption, savings, investment savings.

The article describes the main features of formation and use of financial resources of households in the national economic system. It was established that the main source of household income is labor compensation, which accounts for about 70% of the total household income. The structure of disposable income of households represents final consumption and savings. In the consumption structure, the largest share belongs to expenditures of households on consumer goods and services, the share of durable goods accounted for a smaller cost. Not all households have the opportunity to set aside savings, however, households save some of their disposable income, prefer to invest it into a Deposit in a commercial Bank or to enter the housing market for the purchase of real estate. To invest their savings in buying property prefers most households. However, few have a sufficient level of total income for investments of this kind. For this reason, many households do not save cash and use all their disposable income on final consumption or saving some of their disposable income and postpone it until when the size of the savings will be sufficient to enter the housing market for the purchase of real estate.
