STATE AND LAW. LEGAL SCIENCE

THEORY AND HISTORY OF STATE AND LAW; HISTORY OF DOCTRINES ABOUT LAW AND STATE

TO THE QUESTION OF THE CONCEPT OF “INNOVATION” IN THE RUSSIAN LAW

© 2017 Pashkova Daria Andreevna
Samara State University of Economics
141, Sovetskoi Armii str., Samara, 443090, Russia
E-mail: pashkovadasha@yandex.ru

The article deals with the concept of “innovations” in the economic and legal sense. Innovation is the driving force for the development of society. However, the legal support for innovation in Russia is characterized by a lack of system and the absence of a single conceptual apparatus. The article gives different points of view of the scientific community on the concept of “innovation”, and also analyzes the concept from the point of view of legal regulation.

Key words: innovation, innovation activity, intellectual property, innovative politics, scientific-research activity.

THE NATURE OF THE INTEREST AS THE CRITERION OF CLASSIFICATION DISPUTES

© 2017 Gubaidullina Elmira Khamitovna
Samara State University of Economics
141, Sovetskoi Armii str., Samara, 443090, Russia
E-mail: elmira_zaripova@mail.ru

It considers the scientific approaches to the concepts of “dispute of right” and “interest” articulated in domestic science. Substantiates the idea that this or that interest mediated the offset of its right, ensuring media interest in a particular set of legal possibilities for its satisfaction. It is concluded that the nature of the interest which is to be protected within the framework of the dispute on the law as the criterion of classification, allows us to consider the debate on the right under a separate branch of science as a generic term dispute about the law.

Key words: issue of law, conflict, relationship, security relationship, interference, offense, disagreement.

The project approach is one of the most important management tools in many organizations. In the last decade, project management technologies have been used extensively in many areas of the Russian economy, including those that have not previously been used (the social sphere, the system of state and municipal government, etc.). The study of publications of Russian and foreign specialists allows to draw a conclusion that many changes in the project management process, its interaction with strategic planning, which have recently occurred in practice, have not been adequately reflected. In addition, the available publications on project management are mainly educational literature. During the research methods of analysis and synthesis, comparison, classification, logical and statistical analysis were used.

It is shown that project management is an effective tool that allows initiating, planning and implementing any project, achieving strategic goals, developing on an innovative basis, providing a certain level of competitiveness. It is revealed that the project management toolkit is largely determined by the type of project, its implementation area. The necessity of using project financing in Russian practice is substantiated, its advantages and disadvantages are determined taking into account the stakeholders of the project.

The conclusion is made that organizations applying project technologies are most adapted to constant changes. The necessity of improving the management mechanism of certain projects types is substantiated, taking into

account their role in the implementation of strategic development objectives on an innovative basis. It is recommended to use the project finance model more actively when carrying out projects in the Russian economy.

Key words: project, program, portfolio projects, project management, project finance, project company, priority projects

E-mail: matva@yandex.ru, ms.juliakarpovich@mail.ru

The article describes the special role of risk management in the strategic management of industrial enterprises. The author proposes the concept of "value chain" to identify the key links in developing strategy of industrial company. Choose the strategy relies on the selection of key areas of insurance risks and optimal allocation of enterprise resources. Also the article explains the risk map of an industrial enterprise as a tool of strategic management.

Key words: strategic management, risk-management, risk ranking.
